1:3 LVPECL CLOCK BUFFER WITH PROGRAMMABLE DIVIDER

Check for Samples: CDCP1803

FEATURES

- **Distributes One Differential Clock Input to Three LVPECL Differential Clock Outputs**
- **Programmable Output Divider for Two LVPECL Outputs**
- **Low-Output Skew 15 ps (Typical)**
- **V_{CC} Range 3 V–3.6 V**
- **Signaling Rate Up to 800-MHz LVPECL**
- **Differential Input Stage for Wide Common-Mode Range**
- **Provides VBB Bias Voltage Output for Single-Ended Input Signals**
- **Receiver Input Threshold ±75 mV**
- **24-Terminal QFN Package (4 mm × 4 mm)**
- **Accepts Any Differential Signaling: LVDS, HSTL, CML, VML, SSTL-2, and Single-Ended: LVTTL/LVCMOS**

DESCRIPTION

The CDCP1803 clock driver distributes one pair of differential clock inputs to three pairs of LVPECL differential clock outputs Y[2:0] and $\overline{Y[2:0]}$ with minimum skew for clock distribution. The CDCP1803 is specifically designed for driving 50-Ω transmission lines.

The CDCP1803 has three control terminals, S0, S1, and S2, to select different output mode settings; see Table 1 for details. The CDCP1803 is characterized for operation from –40°C to 85°C. For use in single-ended driver applications, the CDCP1803 also provides a VBB output terminal that can be directly connected to the unused input as a common-mode voltage reference.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of the Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

Copyright © 2003–2013, Texas Instruments Incorporated

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

TERMINAL FUNCTIONS

TERMINAL		I/O	DESCRIPTION
NAME	NO.		
EN	1	I (with 60-kΩ pullup)	ENABLE: Enables or disables all outputs simultaneously. EN = 1: outputs on according to S[2:0] settings EN = 0: outputs Y[2:0] off (high impedance) See Table 1 for details.
IN, $\overline{IN}$	3, 4	I (differential)	Differential input clock. Input stage is sensitive and has a wide common-mode range. Therefore, almost any type of differential signal can drive this input (LVPECL, LVDS, CML, HSTL). Because the input is high-impedance, it is recommended to terminate the PCB transmission line before the input (e.g., with 100 Ω across input). Input can also be driven by a single-ended signal if the complementary input is tied to VBB. A more-advanced scheme for single-ended signals is given in the *Application Information* section near the end of this document. The inputs employ an ESD structure protecting the inputs in case of an input voltage exceeding the rails by more than ~0.7 V. Reverse biasing of the IC through these inputs is possible and must be prevented by limiting the input voltage < V_{DD}.
NC	12		No connect. Leave this terminal open or tie to ground.
S[2:0]	24, 19, 18	I (with 60-kΩ pullup)	Select mode of operation. Defines the output configuration of Y[2:0], see Table 1 for configuration.
VBB	6	O	Bias voltage output can be used to bias unused complementary input $\overline{IN}$ for single-ended input signals. The output voltage of VBB is V_{DD} – 1.3 V. When driving a load, the output current drive is limited to about 1.5 mA.
V_{DD}PECL	2, 5	Supply	Supply voltage PECL input + internal logic
V_{DD}[2:0]	8, 11, 14, 17, 20, 23	Supply	PECL output supply voltage for output Y[2:0]. Each output can be disabled by pulling the corresponding V_{DD}x to GND. **CAUTION:** In this mode, no voltage from outside may be forced, because internal diodes could be forced in forward direction. Thus, it is recommended to disconnect the output if it is not being used.
V_{SS}	7, 13	Supply	Device ground
Y[2:0] $\overline{Y[2:0]}$	9, 15, 21 10, 16, 22	O (LVPECL)	LVPECL clock outputs. These outputs provide low-skew copies of IN or down-divided copies of clock IN based on selected mode of operation S[2:0]. If an output is unused, the output can simply be left open to save power and minimize noise impact to the remaining outputs.

CONTROL TERMINAL SETTINGS

The CDCP1803 has three control terminals (S0, S1, and S2) and an enable terminal (EN) to select different output mode settings.

Rsv	$V_{DD}/2$	1	1	0	N/A	Low	Low

(1) The LVPECL outputs are open-emitter stages. Thus, if the unused LVPECL outputs Y0, Y1, or Y2 are left unconnected, then the current consumption is minimized and noise impact to remaining outputs is neglectable. Also, each output can be individually disabled by connecting the corresponding V_{DD} input to GND.

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature (unless otherwise noted)[1]

V_{DD}	Supply voltage	–0.3 V to 3.8 V
V_I	Input voltage	–0.2 V to (V_{DD} + 0.2 V)
V_O	Output voltage	–0.2 V to (V_{DD} + 0.2 V)
	Differential short-circuit current, Yn, $\overline{Yn}$, I_{OSD}	Continuous
	Electrostatic discharge (HBM 1.5 kΩ, 100 pF), ESD	>2000 V
	Moisture level 24-terminal QFN package (solder reflow temperature of 235°C) MSL	2
T_{stg}	Storage temperature	–65°C to 150°C
T_J	Maximum junction temperature	125°C

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

RECOMMENDED OPERATING CONDITIONS

		MIN	TYP	MAX	UNIT
V_{DD}	Supply voltage	3	3.3	3.6	V
T_A	Operating free-air temperature	–40		85	°C

ELECTRICAL CHARACTERISTICS

over operating free-air temperature range (unless otherwise noted)

LVPECL INPUT IN, $\overline{IN}$

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT

PACKAGE THERMAL RESISTANCE

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$R_{\theta JA\text{-}1}$	QFN-24 package thermal resistance(1)	4-layer JEDEC test board (JESD51-7), airflow = 0 ft/min		106.6		°C/W
$R_{\theta JA\text{-}2}$	QFN-24 package thermal resistance with thermal vias in PCB(1)	4-layer JEDEC test board (JESD51-7) with four thermal vias of 22-mil diameter each, airflow = 0 ft/min		55.4		°C/W

(1) It is recommended to provide four thermal vias to connect the thermal pad of the package effectively with the PCB and ensure a good heat sink.

Example:

Calculation of the junction-lead temperature with a 4-layer JEDEC test board using four thermal vias:

$T_{Chassis}$ = 85°C (temperature of the chassis)

$P_{effective} = I_{max} \times V_{max}$ = 90 mA × 3.6 V = 324 mW (max power consumption inside the package)

$\theta T_{Junction} = \theta_{JA\text{-}2} \times P_{effective}$ = 55.45°C/W × 324 mW = 17.97°C

$T_{Junction} = \theta T_{Junction} + T_{Chassis}$ = 17.97°C + 85°C = 103°C (the maximum junction temperature of $T_{die\text{-}max}$ = 125°C is not violated)

CONTROL INPUT CHARACTERISTICS

over recommended operating free-air temperature range

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{su}	Setup time, S0, S1, S2, and EN terminals before clock IN		25			ns
t_h	Hold time, S0, S1, S2, and EN terminals after clock IN		0			ns
$t_{(disable)}$	Time between latching the EN low transition and when all outputs are disabled (how much time is required until the outputs turn off)			10		ns
$t_{(enable)}$	Time between latching the EN low-to-high transition and when outputs are enabled based on control settings (how much time passes before the outputs carry valid signals)			1		µs
Rpullup	Internal pullup resistor on S[2:0] and EN input		42	60	78	kΩ
$V_{IH(H)}$	Three-level input high, S0, S1, S2, and EN terminals[1]		0.9 V_{DD}			V
$V_{IL(L)}$	Three-level low, S0, S1, S2, and EN terminals				0.1 V_{DD}	V
I_{IH}	Input current, S0, S1, S2, and EN terminals	$V_I = V_{DD}$			–5	µA
I_{IL}		V_I = GND	38		85	µA

(1) Leaving this terminal floating automatically pulls the logic level high to V_{DD} through an internal pullup resistor of 60 kΩ.

BIAS VOLTAGE VBB

over operating free-air temperature range

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
VBB	Output reference voltage	V_{DD} = 3 V–3.6 V, I_{BB} = –0.2 mA	V_{DD} – 1.4		V_{DD} – 1.2	V

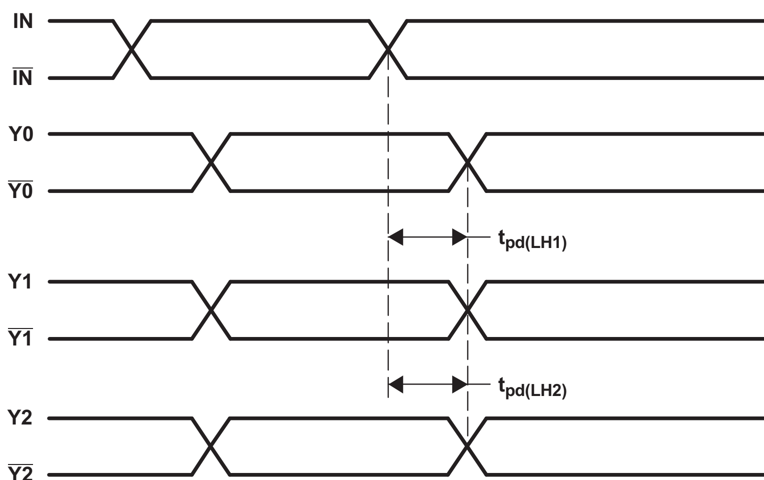
PARAMETER MEASUREMENT INFORMATION



NOTES: A. Output skew , $t_{sk(o)}$, is calculated as the greater of:
- The difference between the fastest and the slowest $t_{pd(LH)n}$ (n = 0…2)
- The difference between the fastest and the slowest $t_{pd(HL)n}$ (n = 0…2)

B. Part-to-part skew , $t_{sk(pp)}$, is calculated as the greater of:
- The difference between the fastest and the slowest $t_{pd(LH)n}$ ((n = 0…2 for LVPECL across multiple devices
- The difference between the fastest and the slowest $t_{pd(HL)n}$ ((n = 0…2 for LVPECL across multiple devices

C. Pulseskew , $t_{sk(p)}$, is calculated as the magnitude of the absolute time difference between the high-to-low ($t_{pd(HL)}$ and the low-to-high ($t_{pd(LH)}$) propagation delays when a single switching input causes one or more outputs to switch, $t_{sk(p)} = | t_{pd(HL)} - t_{pd(LH)} |$. Pulse skew is sometimes referred to as pulse width distortion or duty cycle skew.

T0067-02

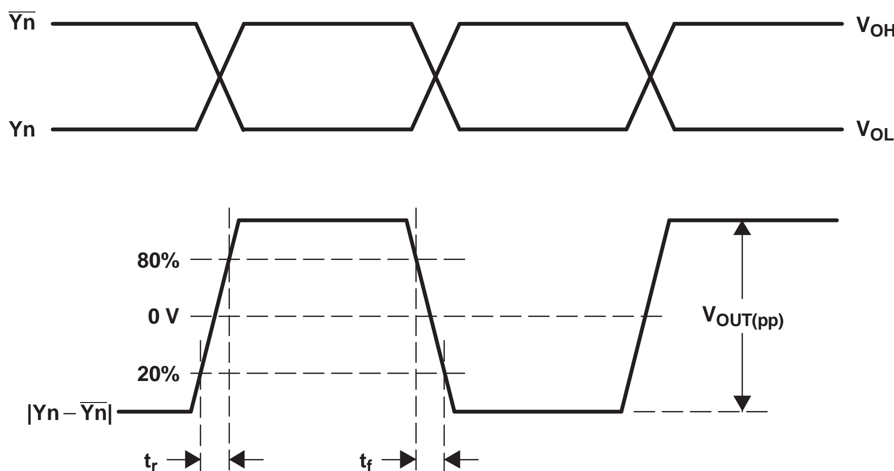

Figure 7. LVPECL Differential Output Voltage and Rise/Fall Time

PCB DESIGN FOR THERMAL FUNCTIONALITY

It is recommended to take special care of the PCB design for good thermal flow from the QFN 24-terminal package to the PCB.

Due to the three LVPECL outputs, the current consumption of the CDCP1803 is fixed.

JEDEC JESD51-7 specifies thermal conductivity for standard PCB boards.

PARAMETER MEASUREMENT INFORMATION (continued)

Modeling the CDCP1803 with a standard 4-layer JEDEC board results in a 59.5°C maximum temperature with $R_{θJA}$ of 106.62°C/W for 25°C ambient temperature.

When deploying four thermal vias (one per quadrant), the thermal flow improves significantly, yielding 42.9°C maximum temperature with $R_{θJA}$ of 55.4°C/W for 25°C ambient temperature.

To ensure sufficient thermal flow, it is recommended to design with four thermal vias in applications enabling all four outputs at once.

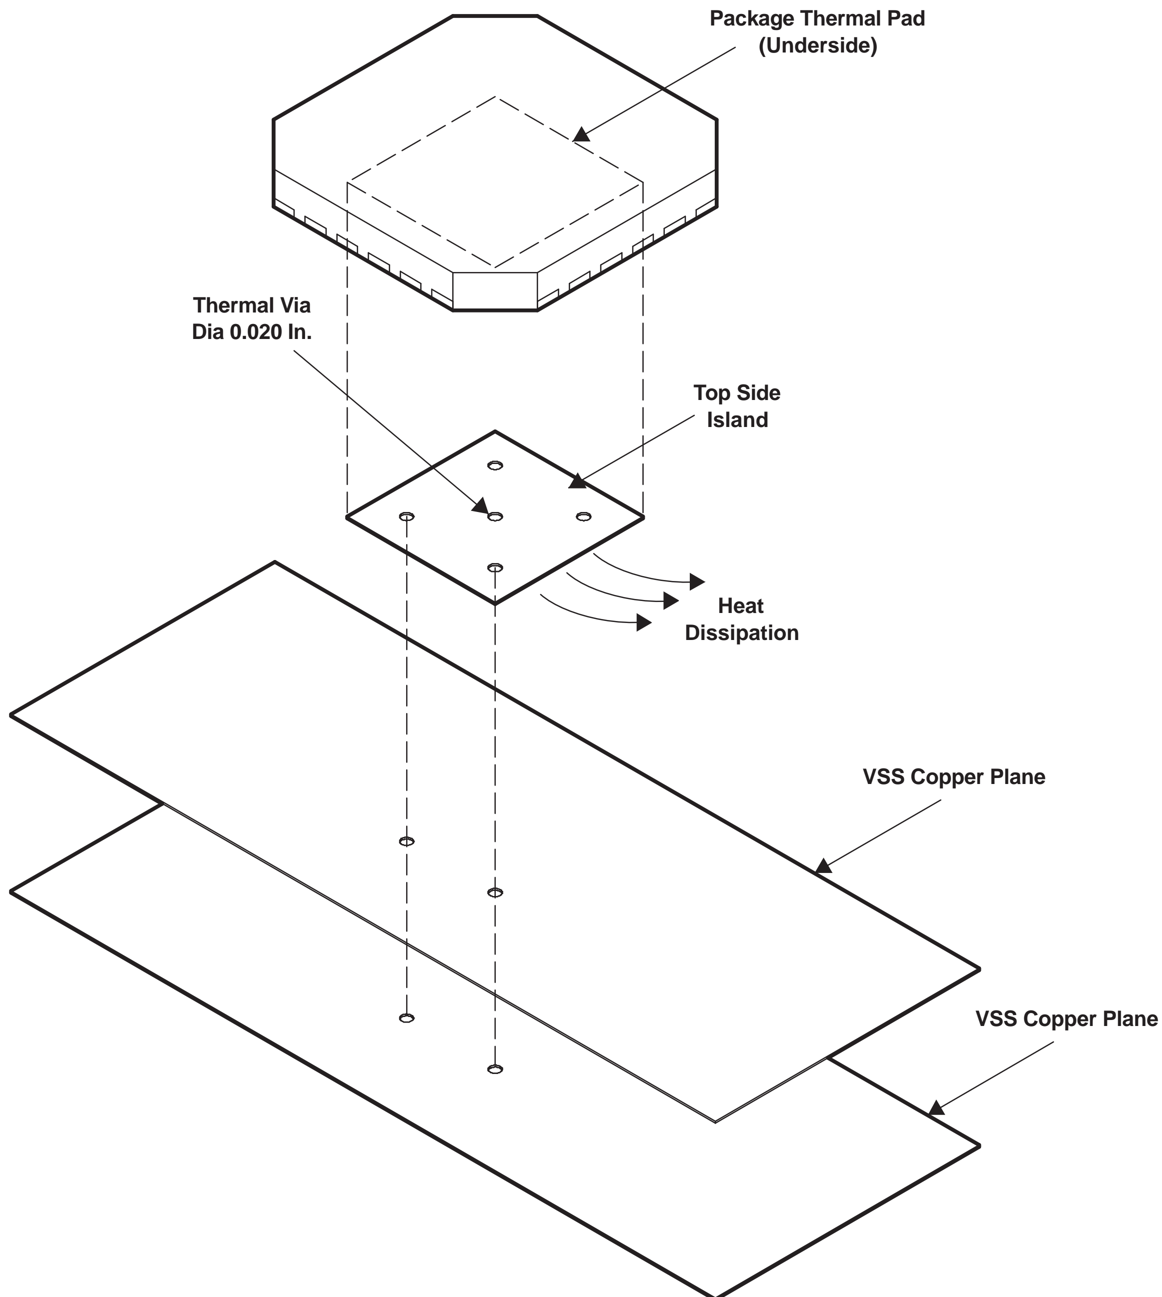

Figure 8. Recommended Thermal Via Placement

See the *Quad Flatpack No-Lead Logic Packages* (SCBA017) and *QFN/SON PCB Attachment* (SLUA271) application reports for further package-related information.

APPLICATION INFORMATION

LVPECL RECEIVER INPUT TERMINATION

The input of the CDCP1803 has a high impedance and comes with a large common-mode voltage range.

For optimized noise performance, it is recommended to properly terminate the PCB trace (transmission line). If a differential signal drives the CDCP1803, then a 100-Ω termination resistor is recommended to be placed as close as possible across the input terminals. An even better approach is to install 2 × 50-Ω resistors, with the center tap connected to a capacitor (C) to terminate odd-mode noise and make up for transmission line mismatches. The VBB output can also be connected to the center tap to bias the input signal to (V_{DD} – 1.3 V) (see Figure 9).

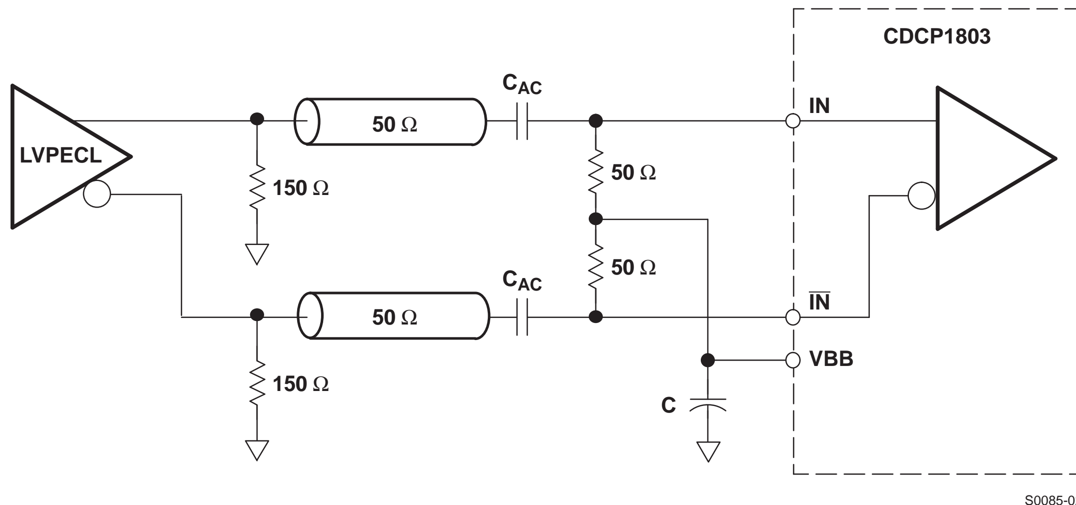

Figure 9. Recommended AC-Coupling LVPECL Receiver Input Termination

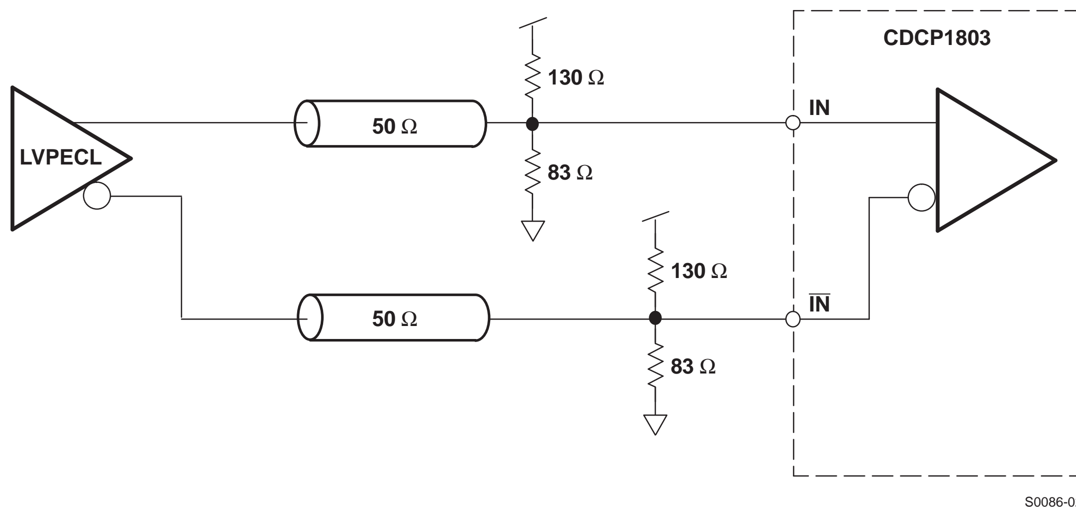

Figure 10. Recommended DC-Coupling LVPECL Receiver Input Termination

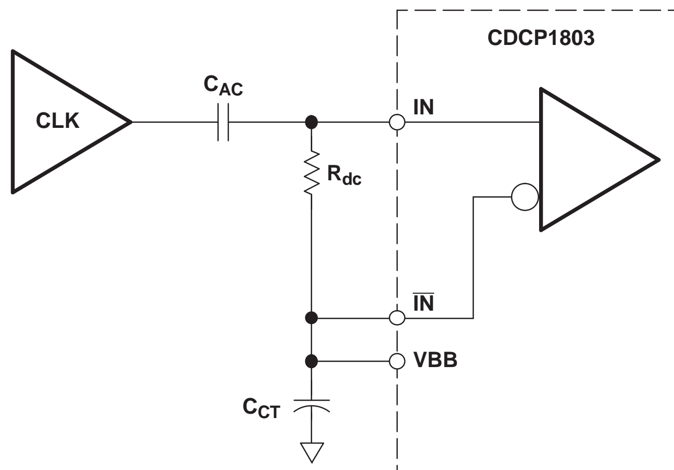
The CDCP1803 can also be driven by single-ended signals. Typically, the input signal becomes connected to one input, while the complementary input must be properly biased to the center voltage of the incoming input signal. For LVCMOS signals, this would be V_{CC}/2, realized by a simple voltage divider (e.g., two 10-kΩ resistors). The best option (especially if the dc offset of the input signal might vary) is to ac-couple the input signal and then rebias the signal using the VBB reference output. See Figure 11.



NOTE: C_{AC} – AC-coupling capacitor (e.g., 10 nF)
C_{CT} – Capacitor keeps voltage at $\overline{IN}$ constant (e.g., 10 nF)
R_{dc} – Load and correct duty cycle (e.g., 50 Ω)
VBB – Bias voltage output

S0087-02

Figure 11. Typical Application Setting for Single-Ended Input Signals Driving the CDCP1803

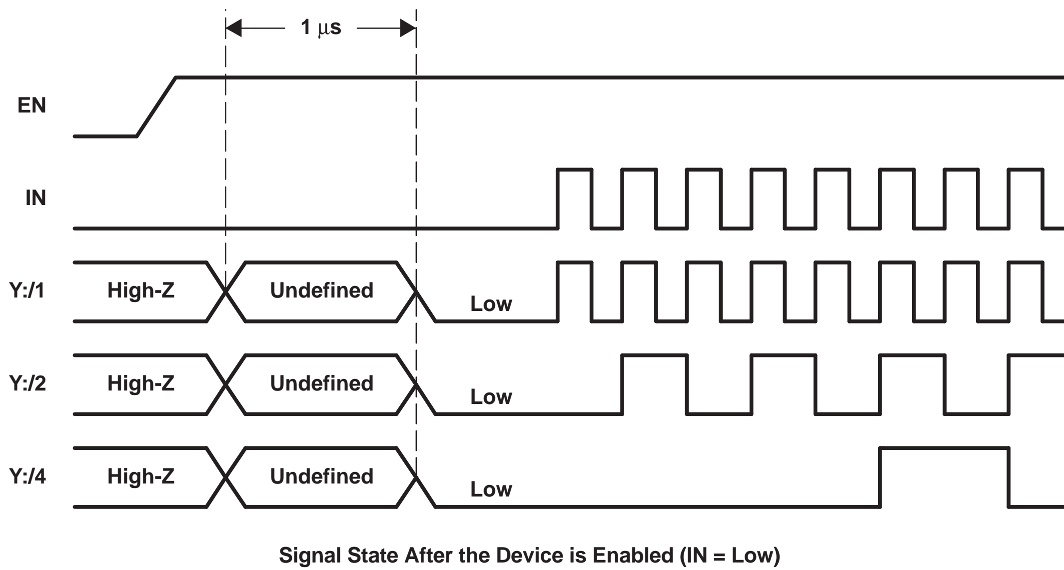
DEVICE BEHAVIOR DURING RESET AND CONTROL-TERMINAL SWITCHING

Output Behavior From Enabling the Device (EN = 0 → 1)

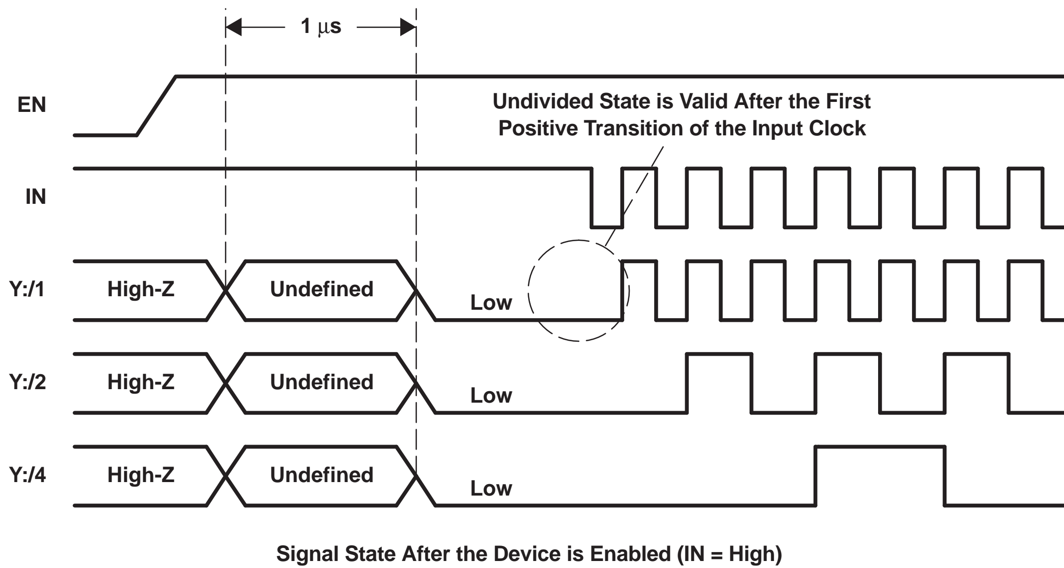
In disable mode (EN = 0), all output drivers are switched in high-Z mode. The S[2:0] control inputs are also switched off. In the same mode, all flip-flops are reset. The typical current consumption is below 500 µA.

When the device is enabled again, it takes typically 1 µs for the settling of the reference voltage and currents. During this time, the outputs Y[2:0] and $\overline{Y[2:0]}$ drive a high signal. After the settle time, the outputs go into the low state. Due to the synchronization of each output driver signal with the input clock, the state of the waveforms after enabling the device is as shown in Figure 12. The inverting input and output signal is not included. The Y:/1 waveform is the undivided output driver state.

Copyright © 2003–2013, Texas Instruments Incorporated



Signal State After the Device is Enabled (IN = Low)



Signal State After the Device is Enabled (IN = High)

T0068-01

Figure 12. Waveforms

Enabling a Single Output Stage

If a single output stage becomes enabled:

- Y[2:0] is either low or high (undefined).
- $\overline{Y[2:0]}$ is the inverted signal of Y[2:0].

With the first positive clock transition, the undivided output becomes the input clock state. The divided output states are equal to the actual internal divider. The internal divider is not reset while enabling single output drivers.

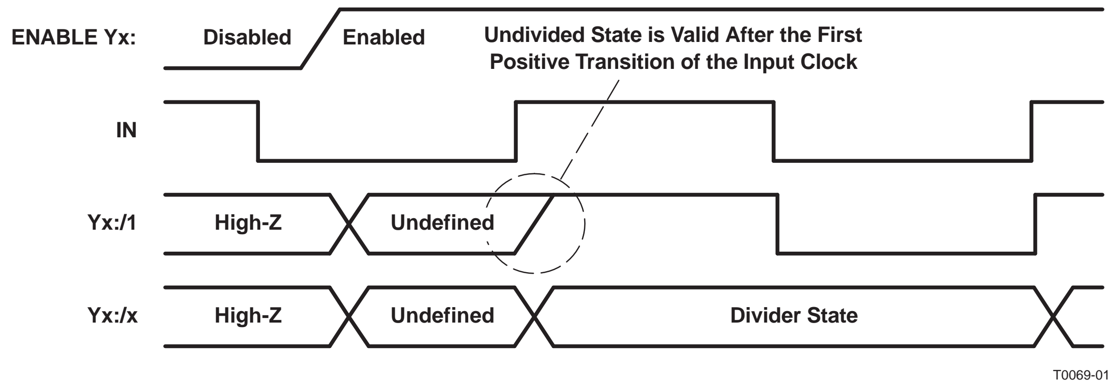


Figure 13. Signal State After an Output Driver Becomes Enabled While IN = 0

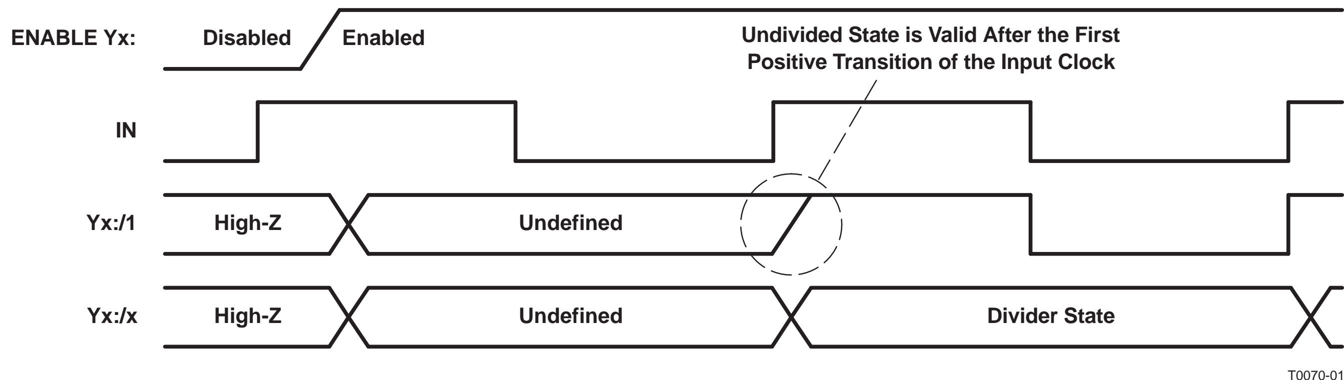

Figure 14. Signal State After an Output Driver Becomes Enabled While IN = 1

REVISION HISTORY

Changes from Revision E (January 2007) to Revision F **Page**

- Changed $t_{sk(pp)}$ Part-to-part skew - included a MAX value of 300 ps 7
- Changed Note B in Figure 6 From: (n = 0…2 for LVPECL, n = 3 for LVCMOS) To: (n = 0…2 for LVPECLS) across 11

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

[6] Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

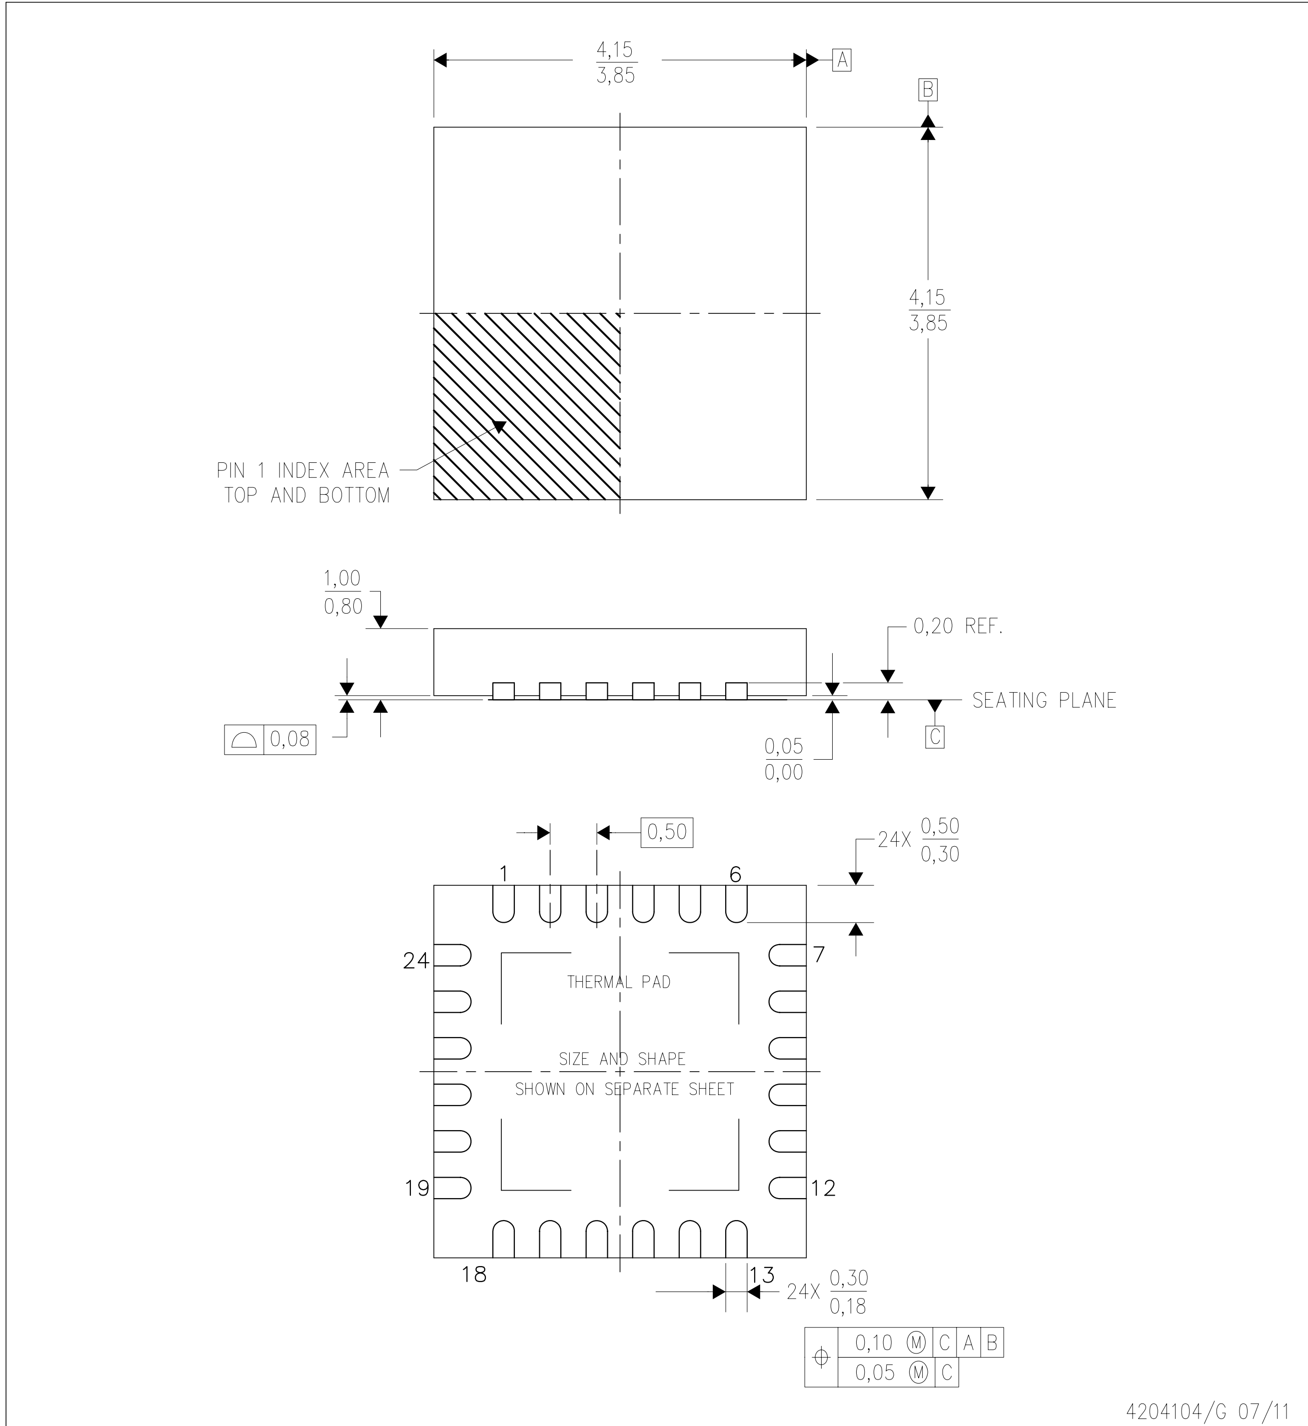
RGE (S-PVQFN-N24) PLASTIC QUAD FLATPACK NO-LEAD



NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
- B. This drawing is subject to change without notice.
- C. Quad Flatpack, No-Leads (QFN) package configuration.
- D. The package thermal pad must be soldered to the board for thermal and mechanical performance.
- E. See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
- F. Falls within JEDEC MO-220.

RGE (S-PVQFN-N24) PLASTIC QUAD FLATPACK NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

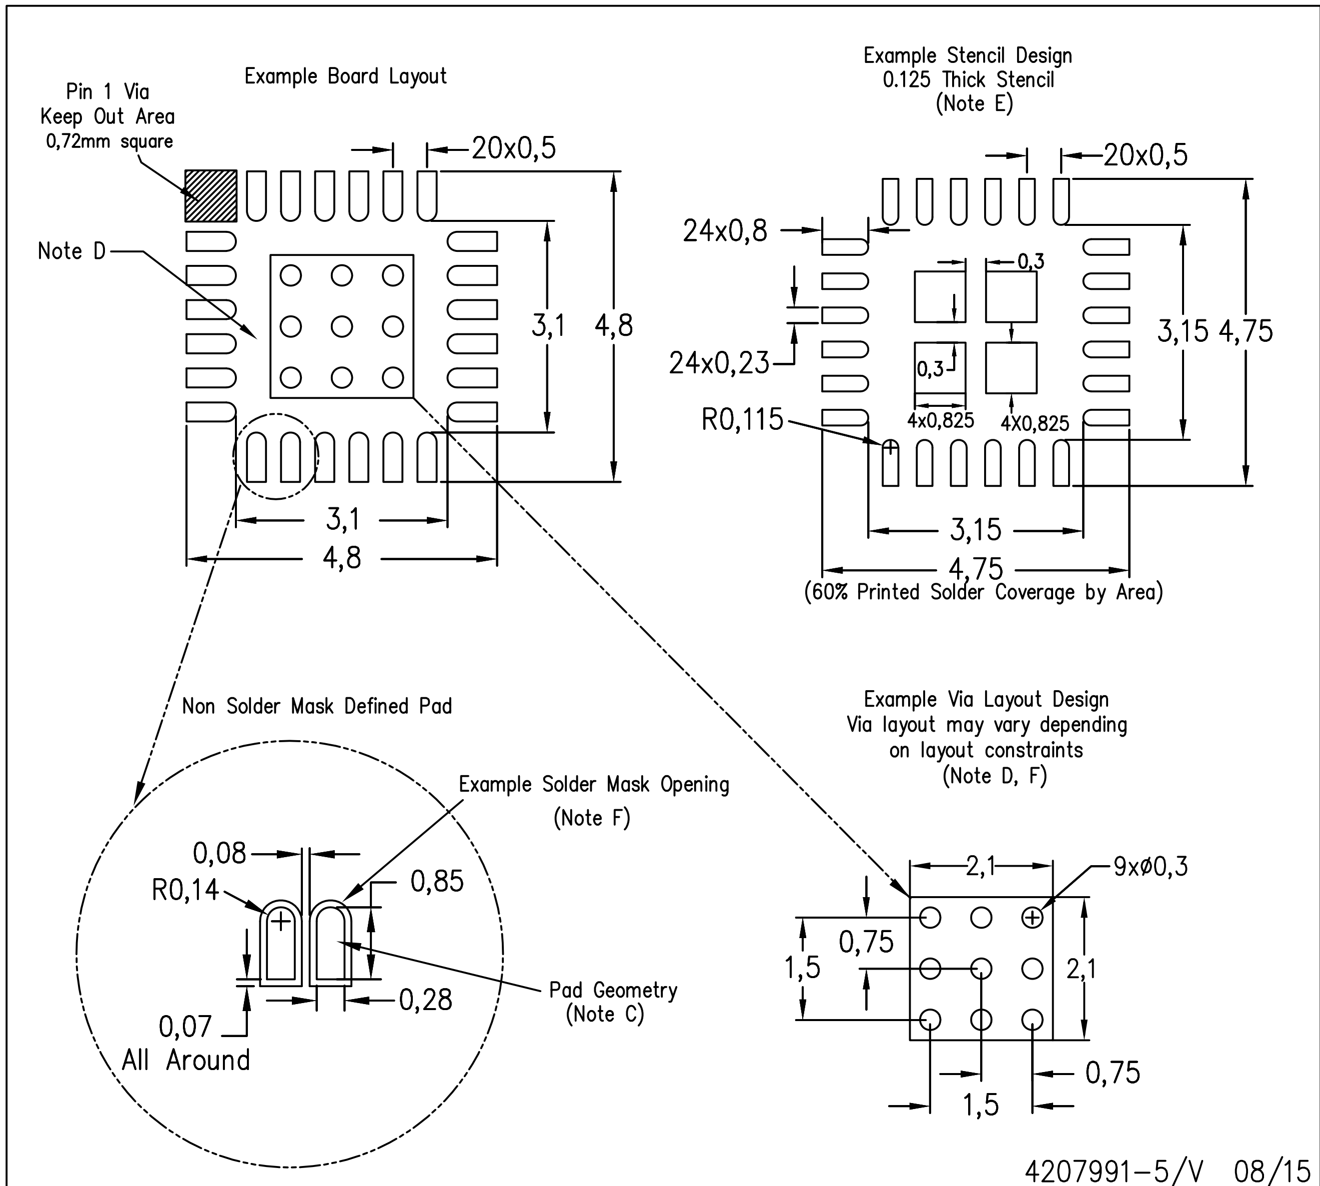
RGE (S-PVQFN-N24) PLASTIC QUAD FLATPACK NO-LEAD



NOTES:

A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Publication IPC-7351 is recommended for alternate designs.
D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <http://www.ti.com>.
E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
F. Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for vias placed in the thermal pad.

IMPORTANT NOTICE FOR TI DESIGN INFORMATION AND RESOURCES

Texas Instruments Incorporated ('TI") technical, application or other design advice, services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using any particular TI Resource in any way, you (individually or, if you are acting on behalf of a company, your company) agree to use it solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources.

You understand and agree that you remain responsible for using your independent analysis, evaluation and judgment in designing your applications and that you have full and exclusive responsibility to assure the safety of your applications and compliance of your applications (and of all TI products used in or for your applications) with all applicable regulations, laws and other applicable requirements. You represent that, with respect to your applications, you have all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. You agree that prior to using or distributing any applications that include TI products, you will thoroughly test such applications and the functionality of such TI products as used in such applications. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

You are authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING TI RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY YOU AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You agree to fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of your non-compliance with the terms and provisions of this Notice.

This Notice applies to TI Resources. Additional terms apply to the use and purchase of certain types of materials, TI products and services. These include; without limitation, TI's standard terms for semiconductor products http://www.ti.com/sc/docs/stdterms.htm), evaluation modules, and samples (http://www.ti.com/sc/docs/sampterms.htm).
